Executive summary

Every organisation is at a different stage in its geospatial AI journey. This short assessment provides a high-level snapshot of your current readiness helping you quickly understand where you may be progressing well and where there may be opportunities to improve.

Based on the Geospatial AI Readiness Assessment, Test301 achieved an overall readiness score of **3/5**, placing the organisation within the **Established** readiness scale. The assessment indicates established core capabilities for Geospatial AI, providing a strong foundation to broaden adoption and realise greater value.

These bands measure preparedness across seven key domains: Strategy, Governance, Technology, Data, Workforce, Service Delivery, and Investment. Key strengths were identified strengths in **Governance, Data**, and **Workforce**, with opportunities for improvement in **Strategy, Service Delivery**, and **Investment**. Continued development and scaling of Geospatial AI capabilities will support operational efficiency, decision-making and innovation.

Capability snapshot

Current Geospatial AI capabilities:

- Exploring AI Tools and Models
- Using: No Geospatial AI capabilities currently being explored

Current deployment architecture: ArcGIS Enterprise (10.9.x)

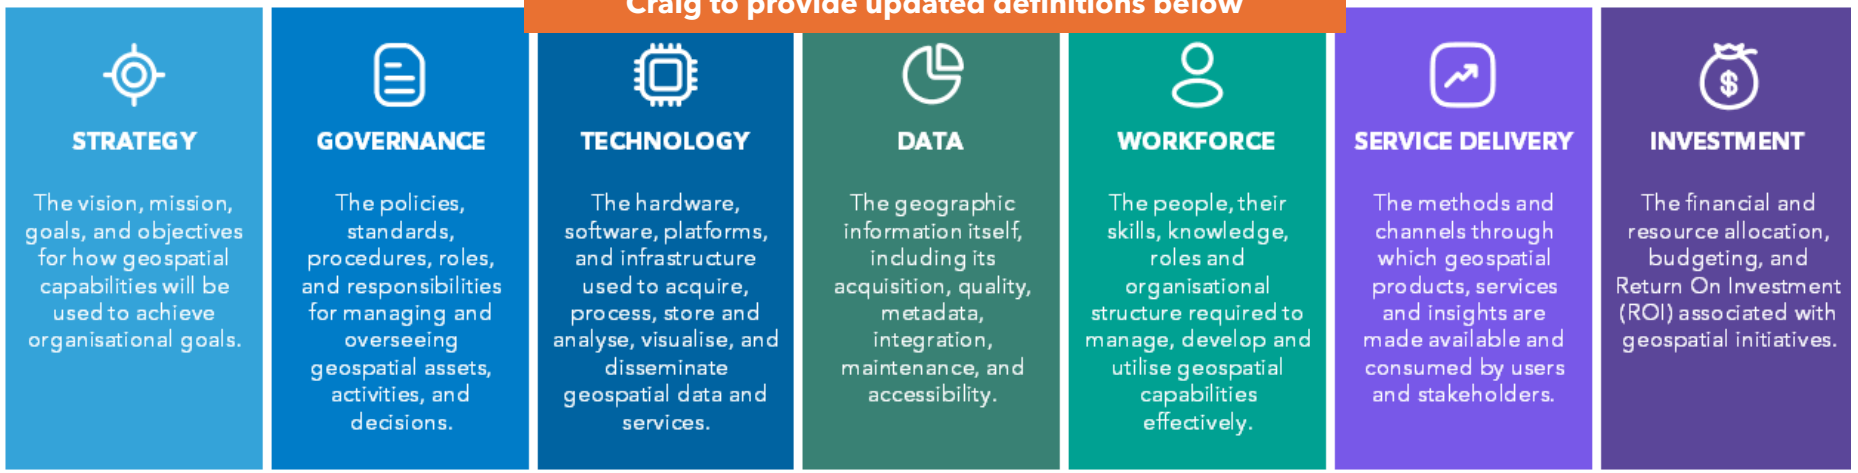

Your current version may limit access to newer Geospatial AI capabilities. Upgrading will help unlock AI Assistants and AI-enhanced workflows..

Where applicable, the ArcGIS Enterprise Upgrade Readiness Assessment can help identify your ideal upgrade path.

Why geospatial AI readiness matters for organisational success

Geospatial readiness refers to how effectively an organisation integrates location intelligence and GIS capabilities into its strategy, operations, and decision-making. It measures the depth of adoption across seven dimensions – strategy, governance, technology, data, workforce, service delivery, and investment.

Craig to provide updated definitions below

Higher Geospatial AI readiness reflect stronger organisational preparedness for Geospatial AI adoption, with the foundations in place to govern, deploy, and sustain AI-enabled capabilities that deliver tangible value.

Faster Value Realisation
Deliver high-impact AI outcomes sooner.

Greater Trust
Govern AI confidently and responsibly.

Enhanced Operations
Automate workflows and accelerate decision-making.

Scale Beyond Pilots
Move AI from trials to operations.

Competitive Advantage
Continuously innovate and create long-term value.

Current state

This snapshot presents a high-level view of your organisation's geospatial AI readiness, highlighting how current capabilities and operating practices align with strategic business objectives.

Key opportunities for improvement and recommended next steps are presented on the following page.

STRATEGY 2/5

Initial Geospatial AI opportunities have been identified and strategic discussions are underway. The organisation is exploring potential use cases but has not yet established a clear roadmap for implementation and investment.

GOVERNANCE 4/5

Governance processes are established and consistently applied across Geospatial AI initiatives. Clear oversight, accountability and risk management practices support transparent and responsible adoption.

TECHNOLOGY 3/5

Core technology capabilities support targeted Geospatial AI initiatives and emerging operational use cases. Integration and scalability considerations are increasingly being addressed to support broader adoption.

DATA 3.5/5

Data is trusted, governed and readily available to support operational Geospatial AI workflows. Consistent management practices enable reliable insights, automation and decision-making.

WORKFORCE 3.5/5

Employees have the skills, support and resources required to effectively adopt and utilise Geospatial AI solutions. Ongoing training and development programs help sustain organisational capability.

SERVICE DELIVERY 2/5

Early Geospatial AI use cases are being trialled to improve specific services and workflows. Benefits are beginning to emerge but have not yet been realised consistently at scale.

INVESTMENT 2.5/5

Early investments are supporting pilot programs, experimentation and capability development. Business cases for broader adoption and scale are still being established.

Future state roadmap

Based on the responses you've provided we've generated the following potential improvements, as a sequenced pathway from priority improvements to an integrated, repeatable and scalable Geospatial AI capability. The outcomes are designed to be directional – supporting awareness and early discussions – rather than a complete or detailed evaluation. We recommend that you get in touch with one of our specialists to discuss your overall assessment and these proposed recommendations in more detail.

Assessment finding → Required action → Evidence of completion → Progression gate

PRIORITY DOMAIN	0–30 DAYS Mobilise	31–90 DAYS Build and validate	91–180 DAYS Embed and scale
Strategy Priority improvement 01 Score: 2/5	**Assess strategic direction** **Action:** Review existing Geospatial AI opportunities and validate strategic priorities with key stakeholders. **Evidence:** Validated use-case portfolio and stakeholder agreement on priorities.	**Define roadmap and value** **Action:** Define business outcomes, value measures, and implementation sequencing for priority initiatives. **Evidence:** Approved roadmap with benefit measures, ownership, and delivery timeline.	**Implement and mature** **Action:** Launch priority initiatives and establish reporting against strategic objectives and outcomes. **Evidence:** Active initiatives with regular KPI and benefits reporting.
Service Delivery Priority improvement 02 Score: 2/5	**Identify service opportunities** **Action:** Review existing pilots and identify opportunities for operational benefits. **Evidence:** Pilot performance assessment completed.	**Strengthen operational delivery** **Action:** Strengthen monitoring, validation and operational support processes. **Evidence:** Operational support procedures documented.	**Scale proven service models** **Action:** Transition successful pilots into supported operational services. **Evidence:** Operational deployments completed and supported.
Investment Priority improvement 03 Score: 2.5/5	**Assess funding and priorities** **Action:** Review investment priorities and expected business outcomes. **Evidence:** Prioritised investment portfolio established.	**Define value and investment** **Action:** Define value measures and benefits tracking processes. **Evidence:** Benefits realisation framework approved.	**Optimise investment and benefits** **Action:** Allocate investment to priority initiatives and monitor outcomes. **Evidence:** Funded initiatives with benefits reporting.

FUTURE-STATE OUTCOMES

Accountable governance | Trusted and accessible data | Operational AI capability | Measured business value

Continue your Geospatial AI journey

Build on the insights from this assessment with practical learning, ongoing updates and specialist support. Choose the pathway that best matches your organisation's immediate needs.
